IP dome with innovative on-board power

Milano, Italy

During this year's Ifsec exhibition, GSG International will introduce its new addition to Euklis range of Dome IP Cameras: a new dome IP cameras with an innovative on-board power and coding system.

DBA - Dynamic Box Adaptor - is the innovative concept that Euklis brings into Security market, through its revolutionary installation and anchorage system. DBA is designed to make Security Installers job much easier, unifying in a single product all the necessary tools to connect and power the dome camera. Thanks to DBA, it will be possible to install a dome IP camera and connect it directly to fiber optic cable, without installing any additional box. Both the Power section and the Encoding and Transmission system, are located inside DBA.

Differently from many other manufacturer that provide this accessories only for analogue dome, Euklis has expressly developed DBA for new digital technologies, aiming on the IP camera success achieved in last years. This unique configuration reduces installation time for the dome camera either in the wall mount or pole mount version. This solution also reduces overall costs for maintaining and repairing operations. Installers will no longer need to dismantle the whole dome camera support for repair/maintenance.

The KLIS DOME IP strength is the modularity of the presented solution. Thanks to DBA it is possible to create up to 8 different IP dome configuration options, selecting both the desired compression (MPEG-4 / MJPEG / H.264) and the connection type (Copper / Fiber Optic MM Multi Mode / Fiber Optic SM Single Mode).

Another distinguishing KLIS Dome IP feature is the local recording module. KLIS D33X-IP-H.264-CF has a local storage slot and it is able to control multiple recording profiles: from on-board recording directly on Compact Flash card, centrally located by Centralized management Software or located outside on iSCSI.

KLIS Dome IP camera offers Dual Streaming technology so that it is possible to produce 2 independent digital video streams. System permits to visualize and record on two different layers of quality, in order to allow more free hard drive space and reduce bandwidth usage.

The video content analysis system integrated inside the KLIS Dome IP Camera H.264-CF version, enhances Intelligence-at-the-Edge concept according to which Edge devices become more and more intelligent. The camera is equipped with Integrated Video Motion Detection. This motion detection algorithm is based on pixels changes and includes object dimensions filter and tamper detection features (optional).
